Literally The Coolest Dry Block In The World!!

AMETEK Test & Calibration Instruments-Americas introduces the **NEW** JOFRA ATC-125 Ultra Cooler, the world's first dry-block calibrator capable of reaching -90°C with a temperature range of 215°C (-90 to 125°C). Featuring Free Piston Stirring Cooler (FPSC) technology for cooling with a special heating element, the ATC-125 offers high accuracy and excellent stability. Extremely fast heating and cooling makes a 5 point calibration up to 5 times quicker than with an equivalent liquid bath.

Ideally suited to calibration applications in the pharmaceutical, food, food ingredients, hospital and marine industries, the ATC-125 can be used to perform fully automatic calibration routines without the need for a PC. However the unit is also fully compatible with PC operation and is supplied complete with JOFRACAL calibration software.

AMETEK Calibration Instruments introduces JOFRA sales and service set-up in the Americas through AMETEK Test & Calibration Instruments (T&CI) – Americas. For more information, contact us @ (518) 689-0222 or check us out online at www.petrolab.com (or www.jofra.com)!
